Video Surveillance

KiwiVision® Privacy Protector®

KiwiVision® Privacy Protector® automatically obscures individuals and vehicles in live and recorded video. Integrated with Security Center's user access rights management, KiwiVision® Privacy Protector® allows organizations to protect the privacy of individuals within view of surveillance cameras, without sacrificing security.

Ensure Privacy Without Compromising Evidence

KiwiVision® Privacy Protector® is a patented software application, developed specifically to monitor actions and movements, while at the same time ensuring the protection of one´s personal privacy. Through pixelization, it automatically obscures persons and vehicles in surveillance videos in real-time. The ideal pixelization level can be chosen for every situation, up to complete coloring to ensure that that the identity of individuals is not recognizable in any scene. The operator only sees the pixelated video image. In case of an incident, authorized Security Center operators can access the plain video.
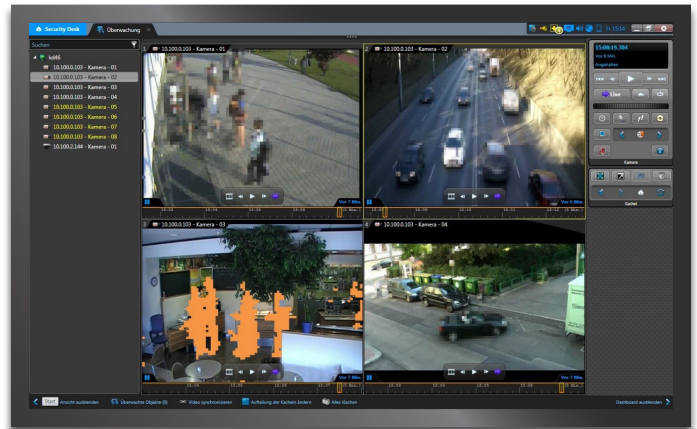

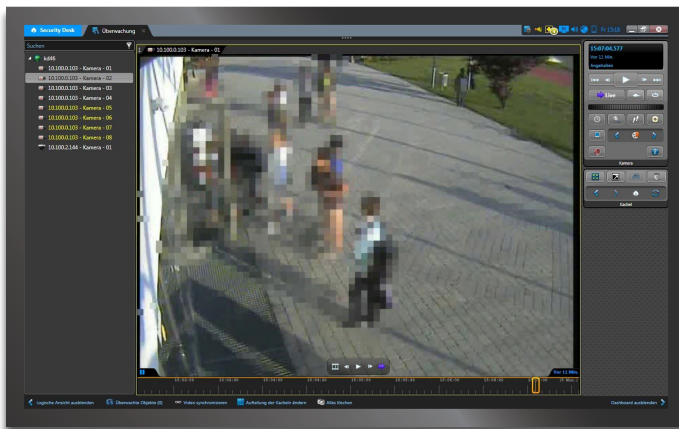

The KiwiVision® Privacy Protector® is the only video surveillance product that has been awarded the European Privacy Seal by EuroPriSe, making it compliant with European privacy laws (first certification in 2009, continuously recertified every two years since).

Privacy Protector® in Security Center ▼

Privacy Protector® integrated in Security Center, obscuring children in video surveillance at a school´s entrance.
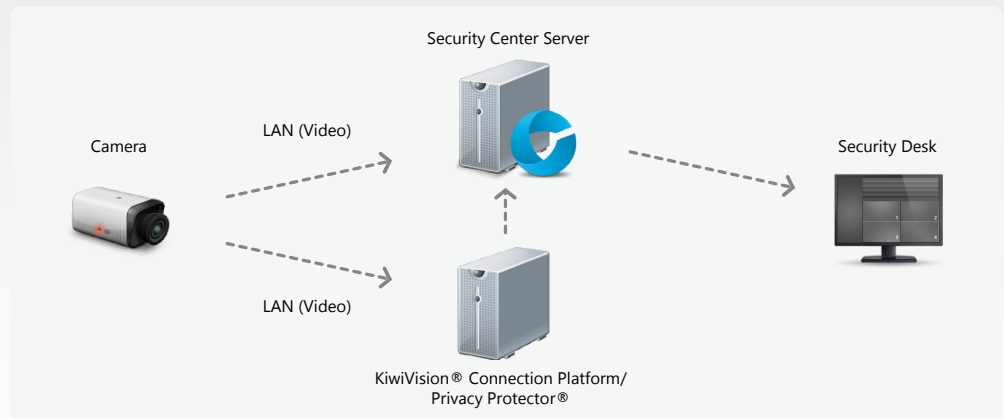

Flexible Obscuring Options ▼

Privacy Protector® can be configured to pixelate or completely block individuals and objects in a camera's field of view.

Integration Architecture ▶

Video is streamed to the KiwiVision® and Security Center servers. The video is transformed into a Privacy Protector® stream and sent to Security Center via RTSP. Access rights define if operators can review the original footage or the obscured video.
